DETAILED ACTION

Allowable Subject Matter

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance.

Zumeris et al. clearly teaches the construction of an actuator (40) for moving a driven member (42), said actuator comprising:

a displacement element (60) for producing a specific displacement;

a drive member (64) connected to one end of said displacement element and which transfers the displacement of said displacement element to a driven member;

a stationary member (62) which supports the other end of the displacement element; and

a drive circuit for driving said displacement element, which is not shown but is inherent (see applied voltage waveforms in Figures 7A & 7B).

Matsuda et al. teaches the construction of a chip member (20), and a trust type actuator having two piezoelectric devices provided for crossing at right angle for the purpose of driving in a precise electronically controlled manner, a multiple axis rotational member or rotor by using a combination of predetermined elliptical trails.

The prior art of record, taken alone or in combination, fails to teach the construction of an actuator as described on independent claims 1 and 7, comprising a compression member for pressing said driven member against the drive member such that the drive member and the driven member are in a state of intermittent contact, and under conditions near a condition of transition from the intermittent contact state to a normal contact state.

Dependent claims 2-6 and 8-12 are considered allowable by their respective dependence on allowed independent claims 1 and 7.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
